

PERSONNEL CLEANING SAFER, SMARTER & COMPLIANT

Safer than compressed air.
Easier to install. Trusted worldwide.

Personal cleaning &
de-dusting solutions.

jetblacksafety.com

TRUSTED BY INDUSTRY WORLDWIDE

The JetBlack Safety range supports international and regional sites through a global network of trained distributors, ensuring local expertise, installation, and ongoing support.

Every system comes with a 12-month warranty, full product support, and guidance for installation and commissioning.

JetBlack Safety units serve a wide range of industries, including:

**Aerospace | Agriculture
Ceramics | Composites
Constructions | Foundries
Glass | Material Handling
Mining | Paper | Quarries
Rubber Manufacturing
Shipbuilding | Textiles
Utilities | Wood - and many more**

COMPRESSED AIR ISN'T THE SAFE CHOICE

Compressed air is fast, but it's also dangerous.

It can cause serious injuries, increase airborne dust, and does not comply with many international safety regulations for personnel cleaning.

No compressed air also means peace of mind and a clear demonstration of duty of care to your workforce. JetBlack Safety systems use blower-powered air at just 2.3 psi / 0.16 bar, delivering high airflow without the risks. They're safer, quieter, and more energy efficient.

Benefits:

- **OSHA-compliant (29 CFR 1910.242(b))**
- **Operates below 78 dB(A)**
- **No compressed air needed**
- **Lower energy usage**
- **up to 30-seconds clean-down cycle**
- **Easy to install, minimal disruption**

JetBlack Safety systems are simple to operate, requiring no specialist training. Teams can use them straight away, with minimal on-boarding or disruption. Just plug in and go.

Personal cleaning & de-dusting solutions.

TWO MODELS. ONE SAFER SOLUTION.

Cleaning Booth:

A self-contained unit with integrated extraction and dual-stage HEPA filtration (F9 + H14). Ideal for areas where airborne dust must be captured. Available in two configurations to suit different environments:

- The manual booth uses the JetBlack Safety blower, allowing the operator to direct airflow as needed.
- The hybrid booth combines automated airflow with a manual nozzle, offering maximum flexibility for different user preferences or contamination levels.
- **Controls dust at source**
- **Reduces risk of cross-contamination**
- **Fully enclosed for operator safety**
- **Designed for dusty, hazardous, or enclosed environments**
- **Available in 230V or 400V (single or three-phase)**

Compared to a traditional air shower:

JetBlack Safety booths use blower-driven air, not compressed air, and do not require expensive ductwork or room integration. They offer effective de-dusting with easier installation, lower operating costs, and significantly quieter operation.

DESIGNED AROUND YOUR WORKPLACE NEEDS

Cleaning Station:

Wall-mounted or portable models for open environments. Fast to install and easy to use, with timed activation.

- Ideal where airborne dust isn't hazardous
- Plug-and-play setup
- Compact, space-saving design
- 1.5m (wall-mounted) or 2.5m (portable) hoses as standard
- Optional hose lengths up to 6m
- 120V or 230V single-phase

Both systems help reduce the risk of cross-contamination from dust and debris on workwear and equipment, especially important in hygiene-critical or multi-stage operations.

Designed Around Your Workplace Needs

Whether you're managing safety compliance, installing across multiple sites, or maintaining uptime on a busy production line, JetBlack Safety systems are built to meet the demands of industrial environments.

The JetBlack Safety range removes barriers to compliance, no compressed air, no over-engineering, no disruption.

Designed for real-world environments, JetBlack Safety solutions are intuitive to use and require no complex setup, supporting seamless adoption across sites.

- Straightforward services with easy filter access
- Filter monitoring indicates when booth filters need replacing
- Thermal cut-out protects the motor
- Spares and accessories available globally
- Long operational life with minimal intervention

SEE IT IN ACTION

Ideal for safety assessments, site trials, or multi-site rollouts.

For local enquiries, please contact your regional JetBlack Safety representative.

Let us show you how JetBlack Safety units protect people, meet compliance standards, and improve operational efficiency.

"The JetBlack system was the perfect solution to our problem. The guys love it. They use it daily."

Robert Bennett

Quality / HSE Manager at GKM Aerospace

"The booths allow us to better protect our staff by removing harmful dust from our workplaces."

Sam Wheeler

Area Manager for LKAB Minerals Ltd
